ABOUT THE SAMPLE REGISTRATION SYSTEM (SRS)

The Sample Registration System (SRS) is a large-scale demographic survey for providing reliable annual estimates of birth rate, death rate and other fertility & mortality indicators at the national and sub-national levels. Initiated on a pilot basis by the Office of the Registrar General, India in a few selected states in 1964-65, it became fully operational during 1969-70 with about 3700 sample units. The field investigation consists of continuous enumeration of births and deaths in selected sample units by resident part time enumerators, generally anganwadi workers & teachers, and an independent survey every six months by SRS supervisors. The data obtained by these two independent functionaries are matched. The unmatched and partially matched events are re-verified in the field and thereafter an unduplicated count of births and deaths is obtained. The sample unit in rural areas is a village or a segment of it, if the village population is 2000 or more. In urban areas, the sampling unit is a census enumeration block with population ranging from 750 to 1000. The SRS sample is replaced every ten years based on the latest census frame. Sample size based on last four Censuses i.e. 1971, 1981, 1991 and 2001 by States/UTs has been provided besides the number of sample units and population covered during 2013. It had been a practice to stagger the replacement process over 2-3 years. However, the latest replacement has been carried out in one go. Effective from January 2004, this sample is based on the 2001 Census frame. At present, SRS is operational in 7,597 sample units (4,433 rural and 3,164 urban) spread across all States and Union territories and covers about 1.5 million households and 7.52 million population. The details about sampling design, sample size, Baseline survey, continuous enumeration half-yearly survey, matching etc. are published in the annual SRS Statistical Reports which is available since 1971.

$$\text{Crude birth rate (CBR)} = \frac{\text{Number of live births during the year}}{\text{Mid-year population}} \times 1000$$

$$\text{Age-specific fertility rate (ASFR)} = \frac{\text{Number of live births in a particular age-group}}{\text{Mid-year female population of the same age-group}} \times 1000$$

$$\text{General fertility rate (GFR)} = \frac{\text{Number of live births in a year}}{\text{Mid-year female population in the age-group (15-49) years}} \times 1000$$

$$\text{Total fertility rate (TFR)} = \frac{5 \times \sum_{15-19}^{45-49} \text{ASFR}}{1000}$$

$$\text{Gross reproduction rate (GRR)} = \frac{5 \times \sum_{15-19}^{45-49} \text{ASFR for female live births}}{1000}$$

$$\text{Age-specific marital fertility rate (ASMFR)} = \frac{\text{Number of live births in a particular age-group}}{\text{Mid-year married female population of the same age-group}} \times 1000$$

$$\text{General marital fertility rate (GMFR)} = \frac{\text{Number of live births in a year}}{\text{Mid-year married female population in the age-group (15-49) year}} \times 1000$$

$$\text{Total marital fertility rate (TMFR)} = \frac{5 \times \sum_{15-19}^{45-49} \text{ASMFR}}{1000}$$

$$\text{Crude death rate (CDR)} = \frac{\text{Number of deaths during the year}}{\text{Mid-year population}} \times 1000$$

$$\text{Age-specific mortality rate (ASMR)} = \frac{\text{Number of deaths in a particular age-group}}{\text{Mid-year population of the same age-group}} \times 1000$$

$$\text{Infant mortality rate (IMR)} = \frac{\text{Number of infant deaths during the year}}{\text{Number of live births during the year}} \times 1000$$

Infant mortality rate comprises of two parts viz. Neo-natal mortality rate and Post neo-natal mortality rate. The neo-natal mortality rate also comprises of two parts viz.Early neo-natal mortality rate and late neo-natal mortality rate. These are defined as:

$$\text{Neo-natal mortality rate (NMR)} = \frac{\text{Number of infant deaths of < than 29 days during the year}}{\text{Number of live births during the year}} \times 1000$$

$$\text{Early neo-natal mortality rate} = \frac{\text{Number of infant deaths of < than 7 days during the year}}{\text{Number of live births during the year}} \times 1000$$

$$\text{Late neo-natal mortality rate} = \frac{\text{Number of infant deaths of 7 days to < than 29 days during the year}}{\text{Number of live births during the year}} \times 1000$$

$$\text{Post neo-natal mortality rate (PNMR)} = \frac{\text{Number of infant deaths of 29 days to < than one year during the year}}{\text{Number of live births during the year}} \times 1000$$

$$\text{Peri-natal mortality rate (PMR)} = \frac{\text{Number of still births and infant deaths of < than 7 days during the year}}{\text{Number of live births and still births during the year}} \times 1000$$

$$\text{Still birth rate (SBR)} = \frac{\text{Number of still births during the year}}{\text{Number of live births and still births during the year}} \times 1000$$

$$\text{Maternal Mortality Ratio (MMR)} = \frac{\text{Number of maternal deaths to women (15-49 years)}}{\text{Number of live births to women (15-49 years)}} \text{ X } 100000$$

MATERNAL MORTALITY IN INDIA

A sample survey of births and deaths known as Sample Registration System (SRS) is being carried out on continuous basis by the Office of the Registrar General, India in randomly selected villages and urban blocks spread throughout the country. The main objective of the survey is to provide annual reliable estimates of birth and death rates at the state and national levels. It also provides other measures of fertility and mortality including total fertility, infant and child mortality rate for bigger (with population 10 million or more as per 1991 Census) States and the country as a whole.

Recently, an attempt has been made through the Sample Registration System (SRS) to provide levels and trends in maternal mortality across the country for the period 1997-2003. The study covers 4,484 maternal deaths among over 1.3 million births occurring in a nationally-representative sample. The Maternal Mortality Ratio (MMR) for the periods 1997-1998, 1999-2001, 2001-2003, 2004-06, 2007-09, 2010-12 and 2011-13 had been estimated and given below:
